

### a Empirical oracle entries

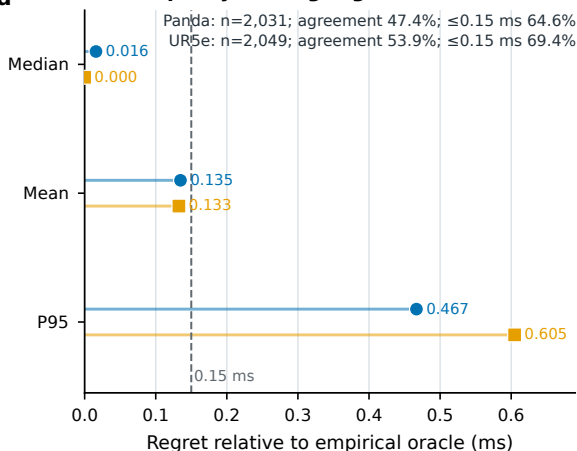

### b Query-family oracle share

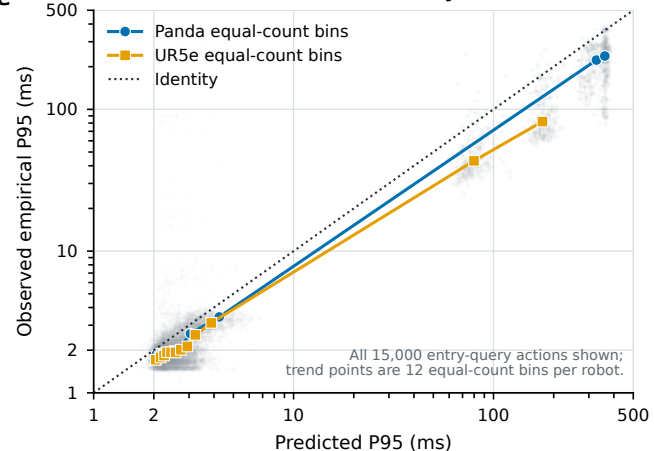

### c Gap to the per-query oracle

### d Frozen-policy routing regret

### e Predicted versus observed entry P95

Development only. Panels a-c use successful action-complete queries (Panda n=17,507; UR5e n=17,584); d uses successful non-abstained policy-validation queries. Panel e uses all three entry actions for 2,500 policy-validation queries per robot. Values are exact frozen-role summaries; no fresh-test claim is made.
